ABSTRACT AMENDMENTS

Please add the present abstract with the cleanly typed abstract submitted on the following separate page.

ABSTRACT

A water meter includes a metal housing which is connectable with a connecting housing through which the water passes and which is disposed in a water pipeline. A plastic measurement insert includes a channel ring upper part, a channel ring lower part and an unpeller mounted therebetween. The metal housing presses the plastic measurement insert onto an outlet opening of the connecting housing. Said plastic measurement insert is seated with its lower edge on a gasket on an inlet opening surrounding the connecting housing to thereby form a seal.
